Forgotten Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Myers Arithmetic: For Grammar Schools This book continues the work of the Myers Elementary Arithmetic and covers comprehensively the work of the last four years of the elementary school. It is a topical treatment of the subject and is thus in itself a complete arithmetic. The educational reason for arithmetic as a school subject is that it is a type of the organization of experience that the world deems useful in daily life. The experiences which arithmetic should organize are sensations of measuring and numbering. In order that this measuring and numbering experience may be organized into the most efficient practical knowledge, the work must be done in harmony with the mind's way of construing these sensations into relationships. Nothing is more fundamentally important than that the pupil actually have the experiences that are to be organized. The ready-made experiences of others cannot be substituted for those of the learner himself. Furthermore, the pupil should organize as well as experience these sensations. The requirement that the sensations to be organized shall be the pupil's own can be met only by the plentiful use of concrete material. The objects, pictures, real problems, and other concrete materials must be not merely talked about by the teacher, the pupil passively listening and looking on. The pupil must handle the objects, draw the sketches, examine them and even make verbal problems. He must be allowed to make discoveries for himself. The concrete material used may be very simple indeed, as sticks, blocks, dots, marks, squares, oblongs. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
