Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Descriptive Geometry, Vol. 1 Descriptive geometry as taught in the Massachusetts Institute of Technology is intended to lead to the solution of the graphical problems which ordinarily arise in engineering and architecture; to train the imagination as necessary in these professions; to cultivate the sense of accuracy; and to give facility in drafting and the ability to read working drawings with ease. Consequently this book, an outgrowth of printed notes, treats the subject from the standpoint of the drafts man rather than from that of the mathematician, placing reliance on graphical methods, and omitting analytical methods. Great importance is attached to the drafting exercises which supplement, at the Institute, the use of the book; in these the student works out a set of study plates which give printed data for a large number of original problems and applications. Considerable work in the projection of solids is given in Chapter VII., since the author believes better results will be obtained if, from time to time, some of this work be combined with the study of the problems on the line and plane. It has also been thought best to give problems in all four quadrants, but the book contains a much larger number of examples in the first and third for the benefit of students in architecture and engineering.
