Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Simplified Methods for Seismic Analysis and Design of Isolated and Damped Bridges in North America | "The research objectives presented in this study are relevant and of significant interest to both the academic and design communities. Some aspects of the research work that I consider to be original and particularly valuable include: - Review of existing CAN/CSA-S6-06, Canadian Highway Bridge Design Code, damping coefficients (B values) for isolated bridges and the proposal of modified values for eastern (ENA) and western (WNA) regions (Chapter 3). - Development and application of an energy based (E-R- μ) method to predict the response of isolated bridges. (Chapters 8 and 9). - Introduction of a dual-level seismic protection approach for isolated and damped bridges (Chapter 10)." " This book is presented in a clear and organized manner and is very well written." (Dr. Michael J. Tait. November 6, 2014.
